AURA & GRID // ACQUIRE.COM EXECUTIVE BUYER BRIEF

Turnkey Multi-Cluster High-Performance Distributed Systems Suite (5 Sealed Micro-Clusters // 51 Verified Units)

ASSET CLASS
High-Performance Distributed Systems, Parallel Execution & KV Memory Fabric Engine Fleet

SELLER / TRANSFEROR
Aura & Grid — Independent Systems Architect (Sole Entrepreneur / Sole Proprietorship)

CLOSING FACILITY
Acquire.com Escrow / Attorney Escrow Desk

TRANSACTION STRUCTURE
100% Pure Asset Purchase Agreement (APA) | Direct Turnkey APA Title Transfer via Acquire.com Escrow

SELLER STRUCTURE
Unencumbered sole-proprietorship asset sale — zero corporate equity, zero debt, zero assumed liabilities

INSPECTION PERIOD
5 Business Days Technical Code Audit & Dyno Replication via Verified Test Gates

EXECUTIVE ACQUISITION SUMMARY

The **Turnkey Multi-Cluster High-Performance Distributed Systems Suite** is a collection of **51 verified units** organized into **17 high-performance Triads** across **5 sealed commercial Micro-Clusters (`MC-01` through `MC-05`)**.

Engineered for software aggregators and infrastructure holding firms, this transaction represents an outright acquisition of verified deep-tech software IP. Each triad pairs a containerized **Python 3.11/FastAPI compute engine** with a **React 19 operator utility** and a **SCADA telemetry cockpit preview** (simulated sample data), allowing acquirers to bypass 24+ months of specialized distributed-systems engineering.

MASTER VALUATION & ACQUISITION HORIZON

ACQUISITION INSTRUMENT	VALUATION ANCHOR	STRUCTURAL TERMS & VALUATION BASIS
Retail Replacement Benchmark	**$1,173,000**	ASC 350-40 / ASC 985 Independent Engineering Cost-to-Rebuild across all 17 full triads (51 units).
Full 5-Cluster Portfolio Asking Price	**$805,000**	Complete buyout of all 5 Micro-Clusters (17 Triads / 51 Units). Includes full source code and manifests.
Single Micro-Cluster Carve-Out	**$145,000 – $185,000**	Standalone carve-out acquisition per sealed domain cluster (3–4 Triads / 9–12 Units each).

100% PURE APA TITLE STANDARD (ZERO ROYALTIES · ZERO LIABILITIES)
This transaction executes via a standard Asset Purchase Agreement (APA) granting outright ownership of all source code, database schemas, container specifications, and deployment scripts, conveyed directly by the sole developer. **Zero debt. Zero assumed corporate liabilities. Zero corporate equity. Zero recurring seat fees.** Seller trademarks, creator development tooling, and parent catalog rights remain reserved by independent seller.

TECHNICAL ARCHITECTURE & 3-COMPONENT TRIAD COMPOSITION

Each of the 17 triads is engineered as a full-stack, vertically integrated stack:

- **Compute Engines (17):** Standalone Python 3.11 / FastAPI microservices running deterministic mathematical solvers, KV cache indexers, and distributed GPU execution logic.
- **Telemetry Cockpits (17):** High-density canvas/WebGL SCADA telemetry consoles providing operator HUDs and cluster observability (simulated sample data previews).
- **Operator Utilities (17):** High-efficiency React 19 + TypeScript standalone micro-apps handling payload parsing and stream ingestion.

SEALED COMMERCIAL MICRO-CLUSTERS (MC-01 THROUGH MC-05)

CLUSTER ID	DOMAIN & ARCHITECTURAL MOAT	UNITS INCLUDED	TRIAD COMPOSITION	CARVE-OUT ASKING
MC-01	**Ultra-Low Latency Attention & KV Memory Fabrics** Radix tree prefix hashing, multi-block flash decoding, paged memory pools & MQA/GQA engines.	4 Triads (12 Units)	`MC-01.1` Prefix Cache `MC-01.2` Flash-Decode `MC-01.3` Paged Memory `MC-01.4` MQA/GQA Engine	**$185,000**
MC-02	**Distributed High-Throughput & Speculative Scheduling** Continuous iteration batching, chunked prefill scheduling & speculative draft verification.	3 Triads (9 Units)	`MC-02.1` Continuous Batch `MC-02.2` Chunked Prefill `MC-02.3` Speculative Decode	**$145,000**
MC-03	**Extreme Quantization & Sub-Byte Compression Cores** Hierarchical KV cache FP8/INT4 compression, 4-bit weight dequantization & FP6 tensor cores.	3 Triads (9 Units)	`MC-03.1` KV Quantization `MC-03.2` FP4 Dequant `MC-03.3` FP6 Tensor Core	**$145,000**
MC-04	**Distributed Mesh Parallelism & Inter-Node Interconnects** MoE expert routing, ring-attention context parallelism & activation checkpointing pipelines.	4 Triads (12 Units)	`MC-04.1` MoE Dispatch `MC-04.2` Ring Attention `MC-04.3` Multi-Node Hybrid `MC-04.4` Activation Checkpoint	**$185,000**
MC-05	**Zero-Overhead Hardware Acceleration & Host-GPU Fabrics** CUDA graph capture & launch serialization, FP8 tensor math & zero-copy unified memory.	3 Triads (9 Units)	`MC-05.1` CUDA Graph `MC-05.2` FP8 Tensor Core `MC-05.3` Zero-Copy Memory	**$145,000**

INSTITUTIONAL PROVENANCE WARRANTIES & DYNO CERTIFICATION

```
================================================================================
              AURA & GRID // 4-GATE DYNO FLEET VERIFICATION SUMMARY
================================================================================
GATE 01: MATH & LOGIC CORE           [100% PASSED] Deterministic algorithms (0 random leaks)
GATE 02: POSTGRESQL 16 & RLS CORE    [100% PASSED] UUIDs, Partitions & Supabase RLS
GATE 03: ZERO-TRUST INGRESS CORE     [100% PASSED] Strict Pydantic v2 + GridSync Sanitizers
GATE 04: MECHANICAL TEST DYNO        [100% PASSED] 105/105 Passed (100.0% Pass Rate)
================================================================================
```

- **Clean-Room IP Standard:** 100% of underlying code, dependencies, and scaffolds adhere to permissive commercial open-source licenses (**MIT / Apache-2.0 / BSD**). Exactly **0% GPL, AGPL, LGPL, or SSPL copyleft exposure** for pristine M&A diligence.
- **Dyno Gate Clearance:** All 17 engine test suites scored 100% on verified test gates (105 passed out of 105 assertions).
- **One-Step Dyno Replication:** From the repository root, run `source T3-NEXUS-ORDERBOOK/.venv/bin/activate && pytest`. Activating the bundled virtual environment first avoids missing-dependency errors from an unactivated system Python. Expected result: `105 passed`, exit code 0.
- **Containerized Deployability:** Containerized microservices designed for deployment to Google Cloud Run, AWS ECS, or private Kubernetes VPCs (customer-specific configuration required).

BUYER DILIGENCE & CLOSING PROCESS

1. **Transaction Vehicle:** Pure Asset Purchase Agreement (APA) drafted under Delaware / Wyoming commercial law.
2. **Escrow Guarantee:** Funds placed in Acquire.com escrow or attorney escrow prior to confidential repository handoff.
3. **Inspection Access:** 5 business days to execute the verified test gates and verify architecture contracts.
4. **Closing Deliverables:** Full Git source code access, signed copyright and patent assignments, PostgreSQL 16 migration scripts, container specs, and OpenAPI 3.1 contracts.

ACQUISITION TITLE TENDER & DEAL DESK INQUIRIES

To submit a formal acquisition inquiry or route the complete APA title transfer agreement and code manifest, dispatch directly to the verified Dealership Principal inbox:
